

SUCCESS **STUDENT CONTEST**

Space station Utilisation Contest Calls for European Student initiatives

The SUCCESS Student Contest is a competition for European university students* from all disciplines to propose an experiment that could be conducted on board the International Space Station (ISS).

** up till the level of "Masters" or equivalent*

Goal

The goal of the competition is to make today's students the Space Station users of tomorrow.

How would you feel, if your ideas were up there?

The first prize of the competition is a one-year paid internship at the European Space Research and Technology Centre (ESTEC) in the Netherlands. During this internship you can work on your own experiment and prepare it for flight towards the International Space Station.

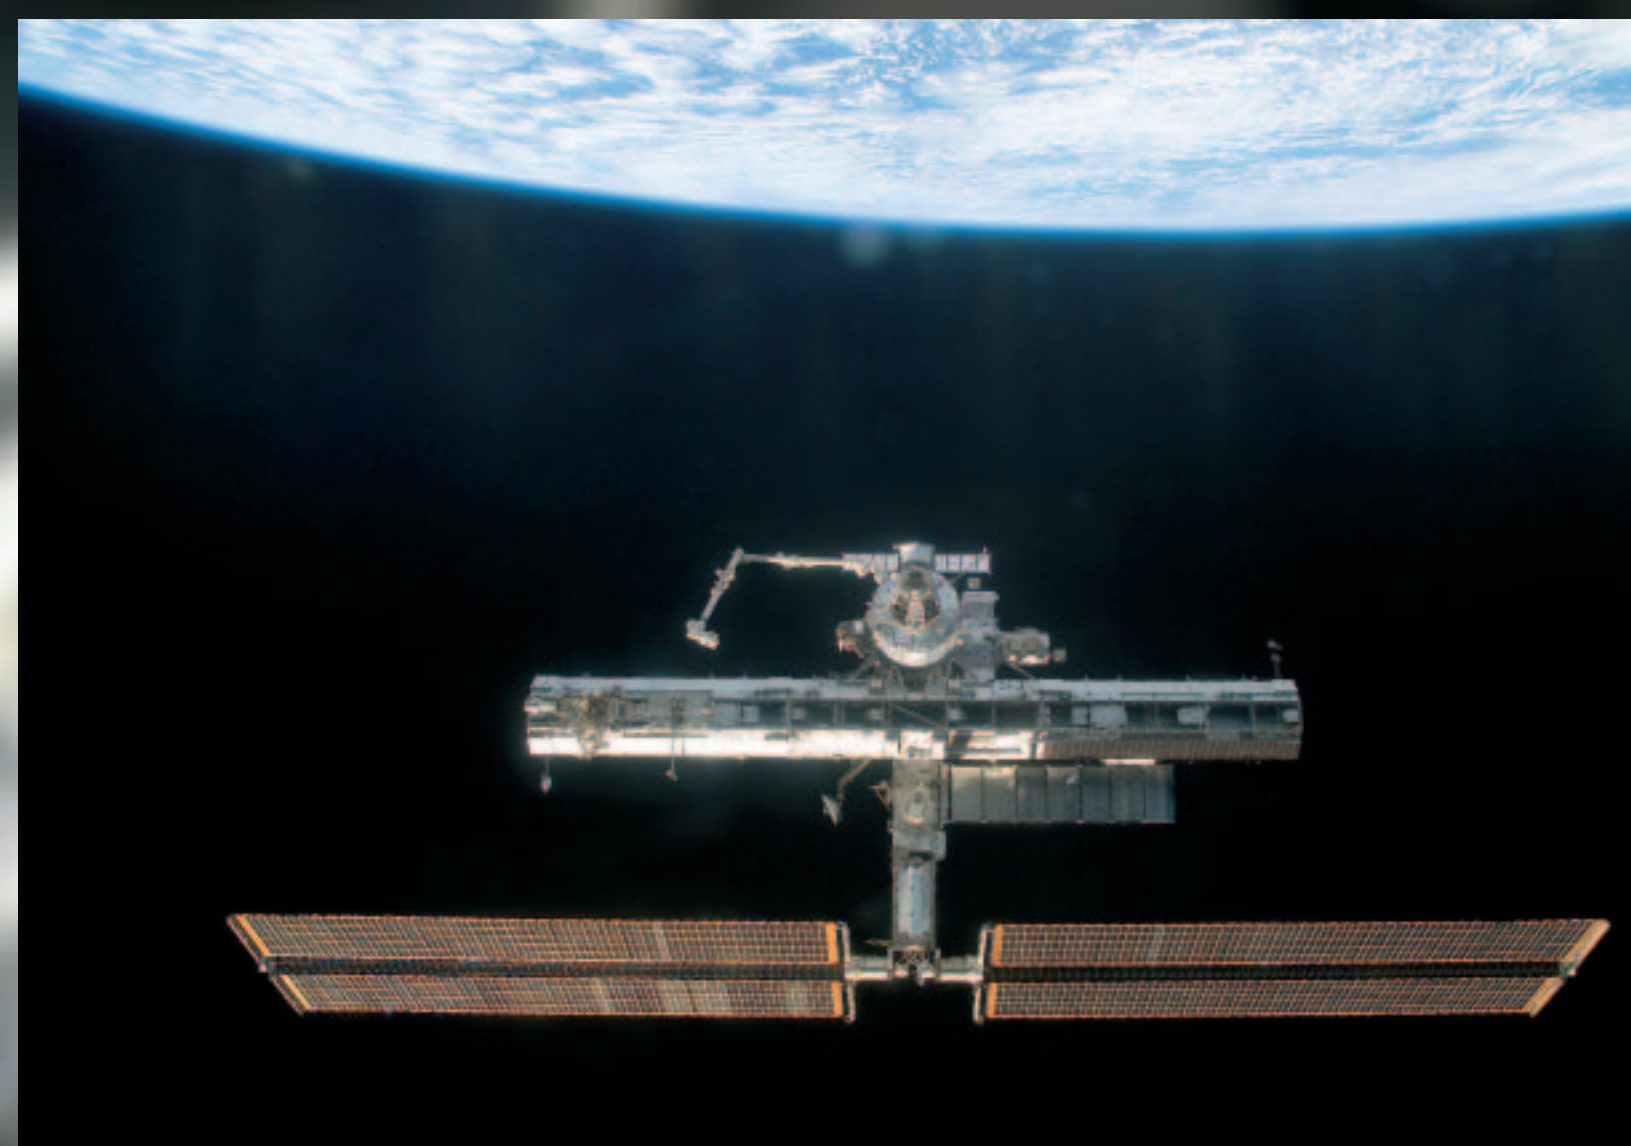

Also for you!

The competition certainly is not only for space engineering or astronomy students. A lot of research is being conducted on a variety of fields like:

- Life sciences
- Physical sciences
- Space sciences
- Earth observation
- Technology

And there are even more categories.

Just try to imagine how the Space Station environment (absence of gravity, the vacuum of outer space, the high altitude above the Earth, space radiation, the isolated environment for the astronauts etc.) could be relevant to your research.
